

# Believe in a brighter future for schools

How Lenovo can help education providers meet modern students' and teachers' needs.

Windows 10

Unlock Limitless Learning

## Education today...

Recent changes to working practices have forced rapid digital transformation upon education.

**90%** of students are out of school globally.

So online learning programmes launched in 2-3 weeks despite...

 Inadequate tools

 Deficit of skills

 Onsite mindset

...and such projects normally taking 2-10 years

## The results?

 Ad-hoc deployments

 Improvised workarounds

 Scarcity of best practice

## Education tomorrow...

The 'new normal' of...

 Keeping everyone informed

 Enforcing social distancing

 Managing risk in teaching

...will require new technology.

## IDC's eight essential guidance points...

**1. Deliver onsite and distance learning**  
Online, cloud-based tools that support both models will be essential.

**2. Assess successes and challenges**  
Staff, students and parents must work together to deliver success.

**3. Be very careful in cutting IT funding**  
Remote learning, social distancing and contact tracing all depend on IT.

**4. Understand the art of the possible**  
Technology will be vital in recruiting students and attracting revenue.

**5. Establish a structured approach**  
The improvised systems of today are low-spec and will not scale easily.

**6. Focus on learning management**  
Transform teaching by making lecture videos available ahead of classes.

**7. Enhance collaboration**  
Institutions should use technology to encourage greater community.

**8. Train the trainers**  
Technology can only do so much. Teachers will need support adjusting.

## Smoothing the transition...

**The future will be a mix of onsite and remote learning:**

Technology is now an essential tool for maintaining teaching continuity.

**Everybody and every classroom has different needs:**

Lenovo can provide access to a wide range of powerful, durable devices.

**Distance-learning solutions require more than just hardware:**

Software, security, collaboration and services and support are all important factors.
