Keep your operations going, whatever happens...

How Lenovo can help your business successfully manage through disruption.

Smarter technology for all

The best devices in the world run Windows 10 Pro.

Intel[®] vPro[®] platform

Too good to be true...

Remember when everyone working remotely seemed like an impossible dream?

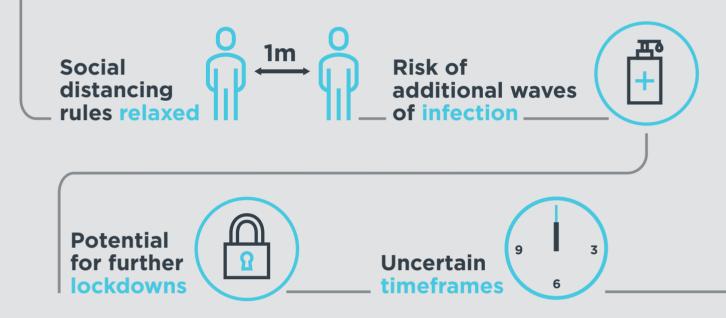

But technology kept us going...

The majority of employees in global countries* believe this may have a long-lasting impact on how employers view remote-work policies.

But getting back to work brings new challenges...

For up to two years...

Be prepared for cycles of operational shutdown

New waves of disruption could impact your supply chain. You need to cope with shortages, new regulations, partner insolvency, loss of infrastructure, strike action, civil unrest, lawsuits, and more.

 Risk and crisis management technologies

Engage with customers seamlessly across digital channels

Customer behaviour has changed, so digital might now be your main experience and competitive differentiator. Previous nice-to-haves – such as fast delivery and screen-sharing - may now be essential.

Customer experience technologies

Improve the employee experience – whatever that means

Home working will become more common in future. How do you maximize productivity while ensuring your workforce stays engaged? New management practices and capabilities will be essential.

 Employee experience and HCM technologies

Implement comprehensive health and safety measures

You may have to make major changes - such as physical workspace redesign for social distancing, personal protective equipment, track-and-trace, screening for fever – that will require automated systems.

Health and safety technologies

Security, privacy and automation will be essential.

You must evaluate every solution and process, and embed these wherever possible.

Success is your only option. You now have to do this.

Forrester says these capabilities are necessary regardless of your economic positionregardless of your economic position.

Keeping everything going over the long run...

The employee experience will change completely. People are the biggest asset for every business. Employers will therefore want to keep everyone enabled with the right technology:

Security:

• Companies need to invest more in security to protect their dispersed workforce

Support

• IT administrators will need to provide all kinds of services, from basic PC support to DaaS
