

Go beyond just using 10%

And see the other 90% you could be missing out on

intel

Intel®

Lenovo

We've all heard some variation of the "we only use 10% of our brains" myth.

It's obviously not true. But imagine if it was. Just think of what we could achieve with the other 90%.

It's a similar situation with Lenovo. Manufacturers are often only aware of 10% of what we do. Which is why we've asked our Lenovo Council to take a closer look at the tech available and show you the other 90% you could be missing out on.

IoT Islaabelle

Enjoys seeing how devices and machinery can work together and gets excited about trying new ways to do it.

AI Anthony

Likes to make things easier, especially with AI assistance looking at thousands of data points.

Immersive Computing Chloe

Loves to get people involved and close up to new ideas with AR and VR, and get them to think differently about what they're seeing.

Workspace William

Prefers to keep cyber criminals at arm's length. And makes sure that everyone working with Lenovo devices can share, store and work on what they need safely.

Infrastructure Ingrid

The brains behind it all, Ingrid brings everyone together and makes sure that they can all do what they need to do it.

There's never been more pressure on manufacturers

Consumers expect you to cut your carbon footprint. Internal stakeholders want more R&D investment in Industry 4.0 technology. And investors insist that business functions cost no more money than they generate.

Intelligent technologies enable manufacturers to meet these expectations, by combining digital and physical assets.

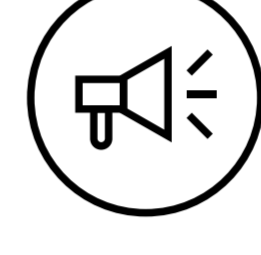

The good news:

With the right technology and expertise, manufacturers can drive greater efficiencies, improve employee experiences, and get more from their R&D.

The tricky news:

Modernizing manufacturing isn't easy. It requires experts with specific sector experience. They need to understand your IT infrastructure and hardware. And know how to create physical/digital operations that deliver value.

The great news:

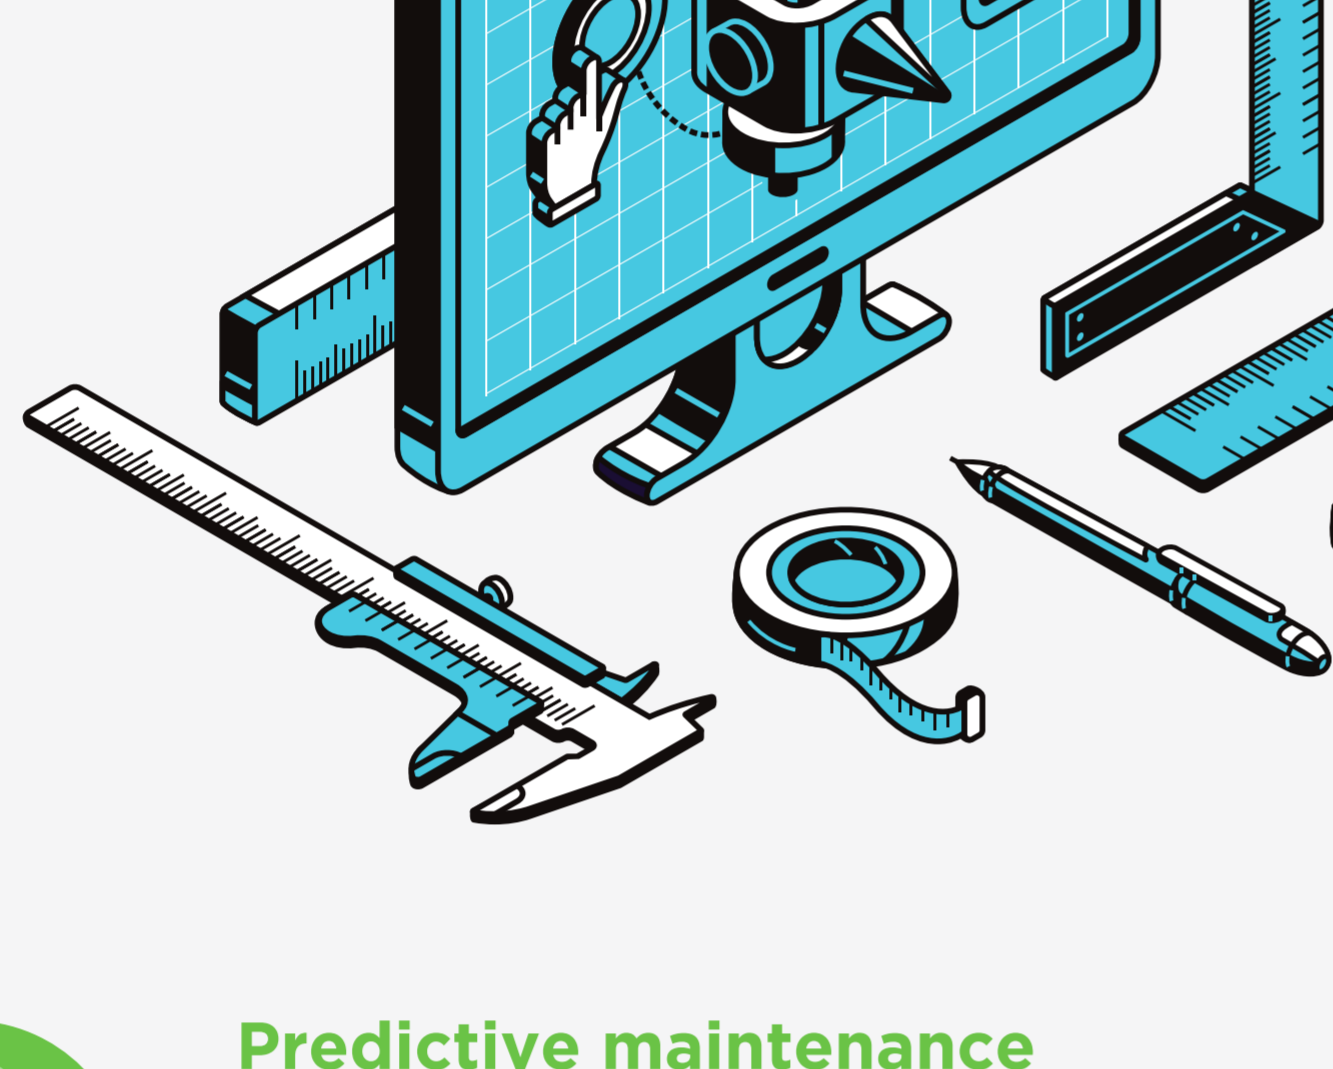

Lenovo doesn't just supply hardware to manufacturers. We're long-term partners. We understand where you're trying to get to, and we have the expertise, innovations and on-going support to make it happen.

Lenovo manufacturing services

Transformative technology

Lenovo devices power smart manufacturing. From easier collaboration and immersive data visualisation, to faster development and more precise production, Lenovo facilitate transformation for some of the world's biggest manufacturers

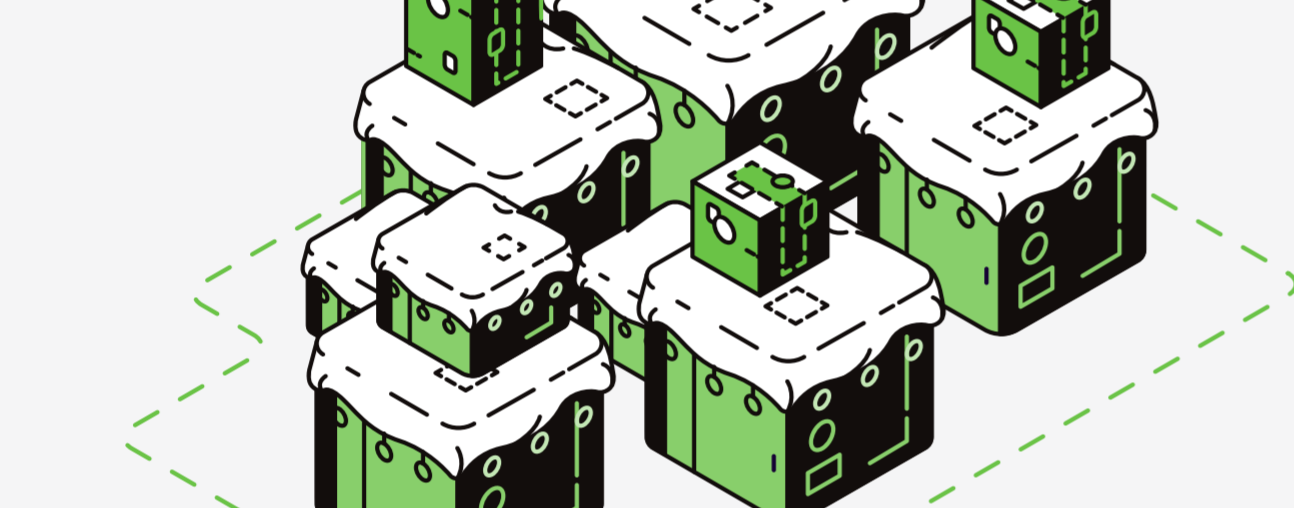

Rapid data analytics

Lenovo has the infrastructure to help you unlock the value of your data and deliver insights faster

Predictive maintenance

Using Lenovo big data platforms, manufacturers can minimize equipment downtime using remote monitoring

Automated inventory monitoring

Lenovo can power a range of Industry 4.0 applications, including those that can help you with forecasting and knowing when to replenish items

Real-time traffic sensors

Build AI applications with Lenovo that can analyse crowd behaviour, help you optimize store layouts, and improve safety

Empowering manufacturers

A single vendor manufacturing ecosystem

We'll supply everything - from laptops and phones, to servers, storage, networking and managed services that cover the full technology lifecycle

Lenovo Premier Support

We give manufacturers access to comprehensive, ongoing hardware and software support from experienced Lenovo technicians

Managed services

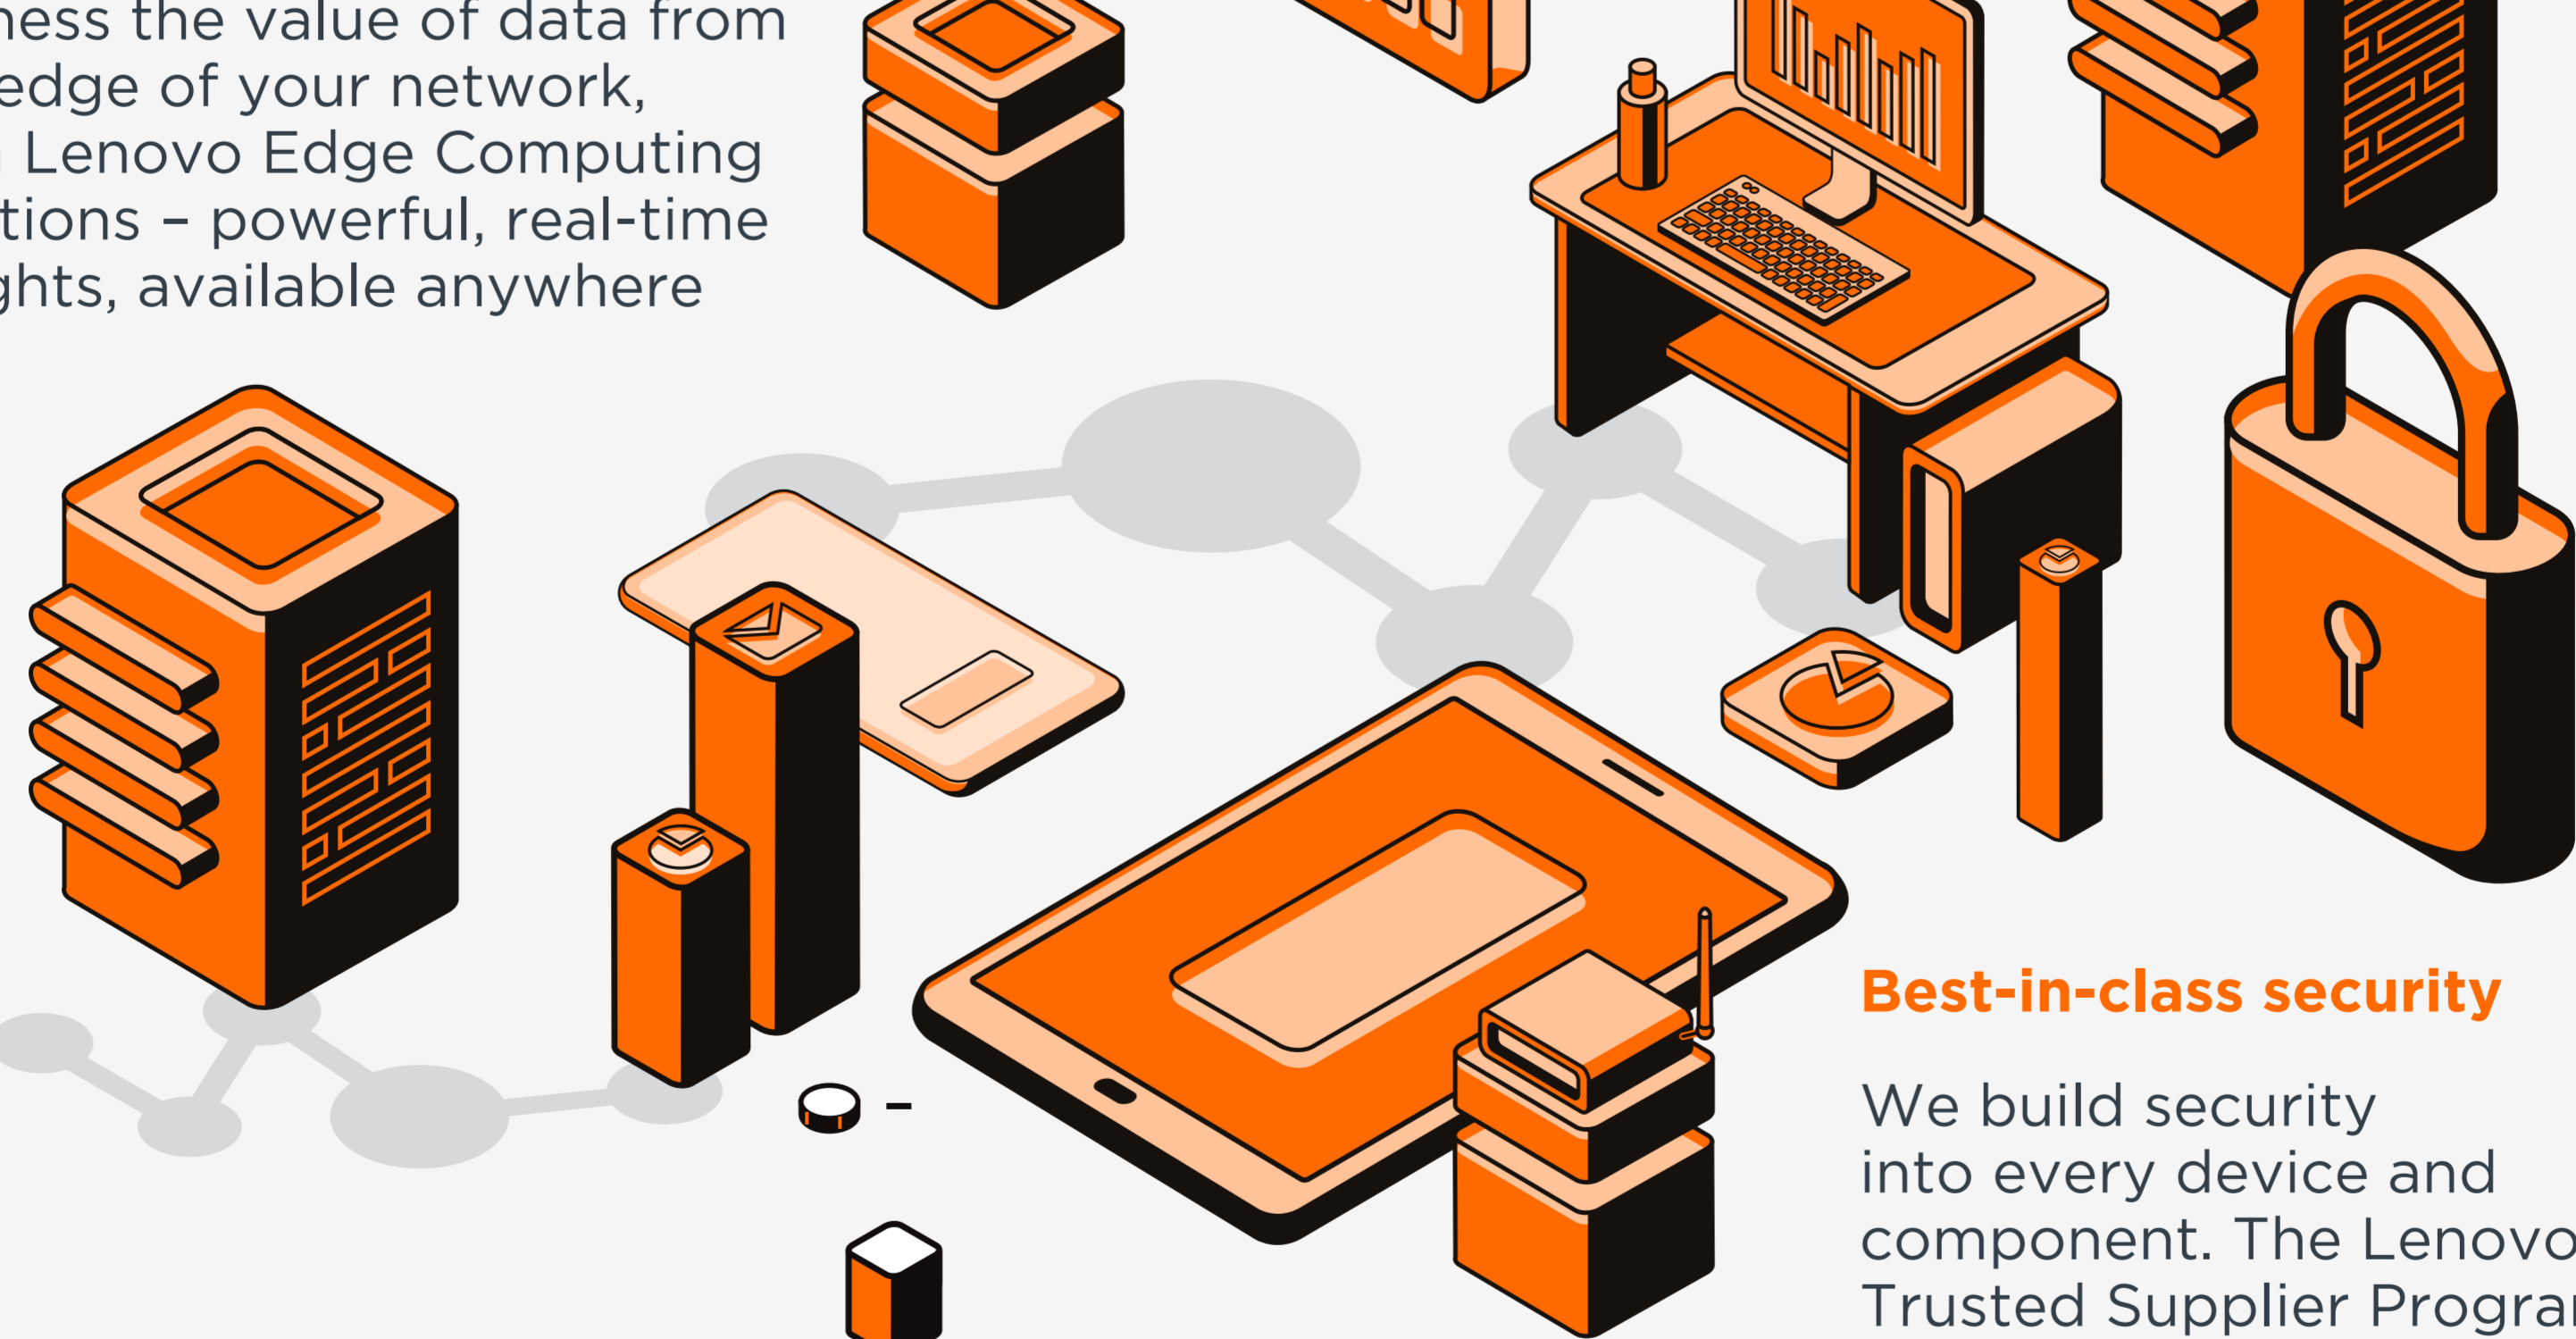

Including 24/7 remote health monitoring and diagnostics; all managed for you by a global field services network

Intelligent Technology Foundations

Edge Computing for manufacturing

Harness the value of data from the edge of your network, with Lenovo Edge Computing solutions - powerful, real-time insights, available anywhere

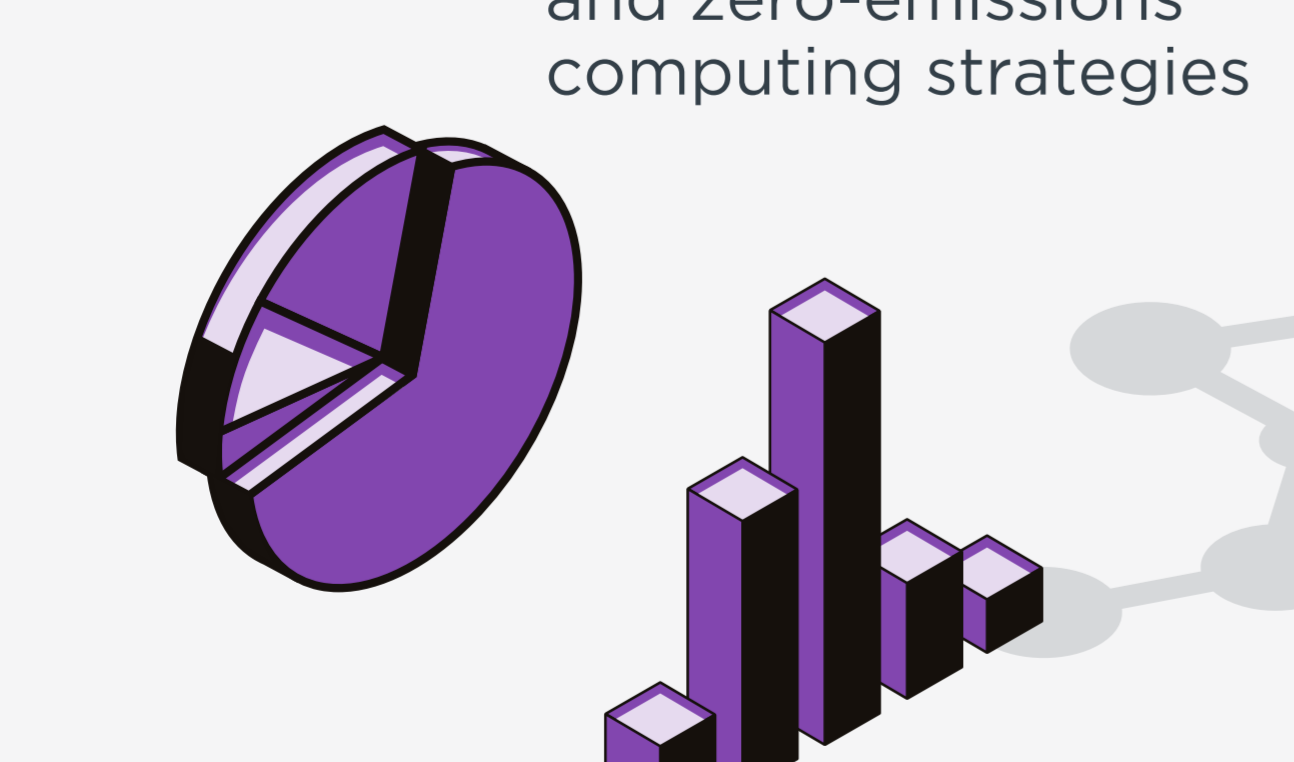

Best-in-class security

We build security into every device and component. The Lenovo Trusted Supplier Program has been recognized as an industry leader by experts in supply chain security

Smarter data centers

Lenovo improves your agility and accelerates manufacturing transformation, with responsible innovation, as-a-Service offerings, resilient edge solutions, and zero-emissions computing strategies

Devices as a Service

Be ready for anything, with flexible, scalable access to Lenovo technology - as and when you need it

Get in touch

Lenovo's manufacturing team has access to some of the best hardware, software, partnerships, infrastructure and aggregate domain knowledge in the industry. They've helped dozens of manufacturers to harness the full potential of intelligent hardware, and transform the way that they work, innovate, and demonstrate value to their customers.

Let us help you get there. Get in touch and we'll show you the art of the possible - and help you create smooth processes, exciting experiences, and lasting advantage in a digitally powered world.
