

Choosing the best AR glasses for knowledge workers

As IT leaders investigate a smart glasses solution for a hybrid workforce, use these important questions to guide decision-making.

Determine value

- What are the business outcomes you hope to achieve by deploying AR smart glasses?
- Can talent pools your organization covets be enticed by the opportunity to work with cutting-edge technology?

Determine problems to solve

- How is your organization addressing workspace needs as knowledge workers move from remote to hybrid workstyles?
- How many of your mobile teams would benefit from the added productivity of multiple screens?
- Are your designers or engineers working with 3D models? What is their workflow for viewing models from 2D to 3D?
- Do your power users who run many demanding applications at once want the same work flexibility provided to other knowledge workers?

Determine feature and functionality needs

- What IT resources can you commit for deployment and configuration? Do you need glasses that are plug-and-play ready?
- Are the glasses compatible with your technology ecosystem? Can they run off a PC?
- Do your remote and hybrid workers need more portable screen real estate with enterprise-grade screen resolution and privacy?
- Can the fit and UX of the glasses be adjusted based on user preference?
- What is the durability and warranty of the glasses? Are they supported by customer service and firmware updates?

For a smarter transformation

Connect ThinkReality A3 PC Edition smart glasses to a Lenovo ThinkPad® with Intel vPro®, An Intel® Evo™ Design with 12th Gen Intel® Core™ processors, and running Windows 11 Pro for business.

Up to 6 virtual screens

For hybrid workers — **ThinkPad® X1 Carbon**

Larger battery for more time unplugged

For mobile users — **ThinkPad® X1 Nano**

Lightest weight, Wi-Fi 6, and optional 4G/5G

Up to 8 virtual screens

For power users — **ThinkPad® P16 Workstation**

Workstation horsepower, ready for TechViz Share&Viz to view 3D models in real time
