

As device usage continues to increase, keeping students safer online has become a key responsibility for educators. To help, Lenovo has developed safety solutions with students, teachers, and IT teams in mind.

Lenovo NetFilter and Lenovo NetFilter+ are cloud-based and Al-driven, providing powerful, real-time protection for student devices in both onsite and remote learning environments.

Smarter technology for all 46%

of US parents say their child age 11 or younger has encountered inappropriate videos on YouTube¹

88%

of US schools are concerned about mental health, self-harm, and suicide³

57%

of US ransomware incidents reported in September and October 2020 involved K-12 schools² **85**%

of US educators are worried about cyberbullying and other online threats³

\$2 million

is the median amount stolen from US school districts via phishing attacks⁴

Using advanced artificial intelligence, Lenovo NetFilter provides real-time analysis of online content that is often missed by other filtering and security products. It not only keeps students safer, but with convenient mass deployment and customizable reports, full implementation is quick and easy.

Al-driven

Dynamically categorize unknown domains and keep the internet filter current.

Compliant

Compliant with data privacy and other regulations required by CIPA, COPPA, the Internet Watch Foundation, Friendly Wi-Fi, and others.

Customized filtering

Block access for specific groups or users based on lists of URLs, keywords, file types, and apps.

Easy mass deployment

Manage one or multiple schools through a single dashboard.

Built-in reporting

Documentation is easy with customizable logging, reporting, and analytics.

Protect mixed environments

Compatible with Mac, Windows, and Chromebooks on the school network or remotely.

Multilingual support

Filtering categorization is available in over 40 languages with 7 interface language options.

Threat detection

Protect school networks against other digital dangers, including malware, phishing, and viruses.

Protect your students

and your network

Faster and more reliable web filtering

Lenovo NetFilter gives school IT teams the tools they need to help mitigate threats to school and home networks, devices, student data, personal safety, and beyond.

Flexible web access policy management

Set your web access policies based on granular or general attributes, including username, groups, time, day, and more. Implement user-based policies to personalize access down to the user or group. For example, set time and calendar-based rights to grant web access during certain days or hours, increasing productivity and reducing bandwidth usage during school hours.

Powerful application access policy settings

Manage student access to leading web applications, including Facebook, Twitter, Flickr, YouTube, LinkedIn and more. Set your own criteria for access based on user, group, applications, and postings.

Zero-day cyber threat protection

Help detect and stop both known and zero-day malware threats such as viruses, spyware, phishing frauds, and other forms of malicious code.

Designed to work with existing IT

Lenovo NetFilter makes implementation and usage easier by integrating with LDAP, Active Directory, eDirectory, Radius, Captive Portal, Transparent authentication options, Microsoft IIS, Authenticated Redirect Portal, Single Sign On (SSO) for Google, and Microsoft.

Support K-12 IT administration globally

Multilingual support with categorization in over 40 languages. Additionally, the interface can be set to over 7 languages.
