

5 solutions to level up security and move your organization forward

Strong security gives IT leaders the peace of mind to drive transformational change. Here are five ways human-centered digital workplace solutions support their vision.

Hover on the  in each section to learn more

1 Identity protection

Protect employees working from anywhere with a Zero Trust security posture.

The Lenovo ThinkPad® X1 Carbon — powered by Intel vPro,® An Intel® Evo™ Design, built for what IT needs and users want, with Windows 11 Pro — supports frictionless biometric authentication and features critical online security protections to lock out cyberattacks.

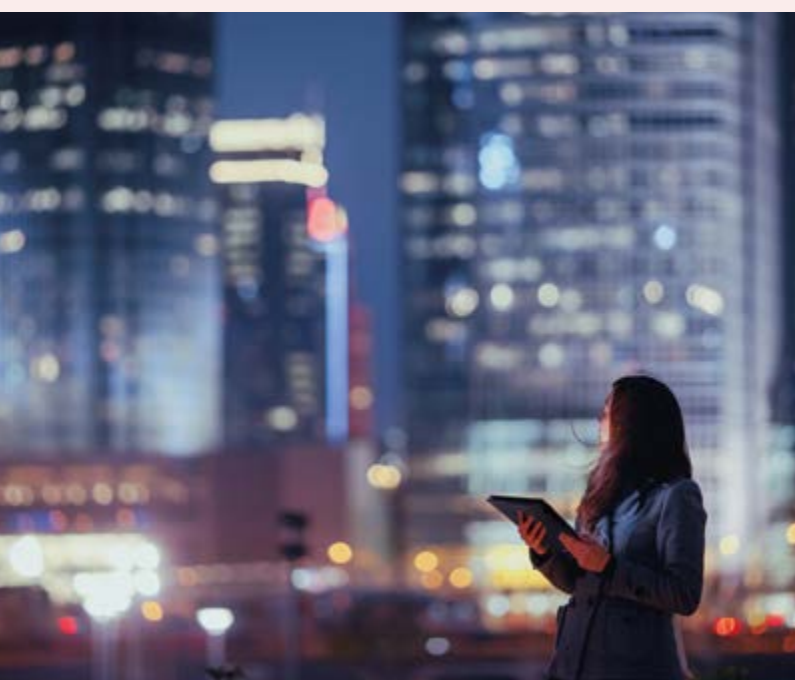

Security management 2

Build a safety net by enlisting a trusted partner to help manage workforce security.

3 Hybrid cloud

Support a growing organization with an agile hybrid cloud infrastructure.

A pay-as-you-go model ensures you stay right-sized while protecting your organization with the optimal mix of on-premises and cloud-based security.

Firmware protection 4

Deploy devices that help defend and repair themselves.

Secured-core PCs protect with deep integration between hardware, firmware, and software. We can ship them with Secured-core PC features enabled by default. And Windows 11 features like SecureBoot and hardware-based root of trust prevent malware from infiltrating.

5 Troubleshooting and support

Reduce downtime and minimize disruption to employee productivity.

Contact your Lenovo representative today to see how you can safeguard your team and unlock opportunities with a better technology experience. Visit www.lenovo.com/Digital-Workplace to learn more.
