

HOW DOES ONE INNOCENT EMPLOYEE MISTAKE **BRING DOWN** **A WHOLE COMPANY?**

ThinkShield

Sometimes employees make mistakes—losing devices, clicking on things they shouldn't, or even disabling protections that get in their way. Lenovo ThinkShield helps to prevent and contain human error before it turns into a devastating breach—without getting in the way of productivity.

For IT admins seeking more visibility into endpoints, as well as solutions that are less cumbersome for end-users, ThinkShield's portfolio includes:

- Persistent endpoint visibility by Absolute
- Business data protection with BitLocker⁴ data and device encryption
- Advanced boot and run time protection with Windows Defender System Guard⁵
- Intel® Authenticate Solution
- Lenovo Wi-Fi Security

LEADING BIOS SECURITY

With Intel® Hardware Shield

With the power of the Intel® vPro™ platform, Lenovo ThinkShield provides BIOS that can self-heal in the event of corruption by human error or attack. And unlike other PC manufacturers, we did not build in a backdoor, so BIOS can be administered securely. If you're skeptical, you can arrange a look through the 2,000,000+ lines of code in our secure BIOS Reading Room.³ We'll even let you create a unique signature for the BIOS you reviewed.

ThinkShield is Lenovo's portfolio of secure Think devices, software, and services—fully customizable to keep your business ahead of dangerous breaches. Get the most comprehensive protection with a modern Windows 10 Pro device powered by the Intel® vPro™ platform.

DESIGNED FOR BUSINESS.
PERFECTED FOR PEOPLE.

In 2015,
one click from an
employee at Anthem
**EXPOSED THE PERSONAL
DATA OF 78 MILLION PEOPLE,**
costing the company
an estimated

\$100+
million.¹

48%
of breaches originate from
HUMAN ERROR.²

 vPro™ Platform  Windows 10
Windows 10 Pro means business.

⁴ Requires TPM 1.2 or greater for TPM-based key protection

⁵ Windows Defender System Guard's boot time integrity protection requires the use of UEFI 2.3.1 or greater with Secure Boot. The optional remote integrity validation capability using the Windows Defender System Guard cloud service requires TPM 1.2 or greater and a management system that supports remote attestation capabilities (e.g.: Intune and System Center Configuration Manager).
