Prior to the current landscape, remote healthcare was growing, primarily to meet the needs of underserved populations and homebound patients. Technology that addressed provider mobility and on-the-go patient engagement were already in place.

Now, care delivery necessitates virtual solutions centered on rapid access, patient safety, and privacy. Are you prepared to leverage virtual healthcare for improved outcomes?

There’s a smarter way forward.

A pulse on healthcare

- There has been a 600% increase in virtual healthcare visits for Q1 2020.
- Efficient patient care delivery is key, as estimates predict a US physician shortage of 120,000 by 2030.
- Chronic disease is rising. There are 463M people globally with diabetes. Virtual care improves biometric monitoring and patient compliance.
- More solutions are needed to protect health information at rest and in transit. Over 41 million patient records were breached in 2019—nearly 3x in 2018.
- There’s a growing desire for more remote healthcare services. 91% of patients say they’d like to use mobile tools to communicate with their providers.
