As an industry leader in recycled material innovation, we’re proud to show you what we’re made of.

Post-consumer recycled content (PCC)
We’ve used more than 110 million pounds of net recycled plastic — like water bottles and other used consumer products — in the manufacturing and packaging of our laptops, desktops, workstations, and accessories.

Closed-loop PCC
We source recycled content from end-of-life IT and electronics equipment.

By 2025, 100% of our PC products will contain post-consumer recycled content.¹

X1 Carbon 7th Generation
Meet the first Lenovo laptop to be made with closed-loop post-consumer recycled content.

Sustainable components
Lenovo ThinkPad® products are made with post-consumer recycled content and Intel® Evo™ platform powered by Intel® Core™ vPro® processors used are made from 100% conflict-free minerals.

Sustainable accessories
Our new PC adapter is made with an industry-leading 90% PCC. We collaborated with Sony Semiconductor Solutions Corporation on this project to prove that PCC plastics can be upcycled and used at high percentages — even in electronics with demanding technical specifications.

Learn more about our environmental, social, and governance (ESG) efforts at www.lenovo.com/esg.

¹ Excludes tablets and accessories.
